Gadwin PrintScreen Language File

// This is a sample Gadwin PrintScreen language file, listing all the
// strings contained in Gadwin PrintScreen. To use the file, place it
// in the same directory as PrintScreen.exe, and call it *.lng
// where * can be anything, however it is recommended that it be the
// language. Currently if there is more than one then which one is used
// is undefined. Only left-to-right languages are supported. If a translated
// string will not fit in its allocated space, try to re-phrase it to fit.
// If you really can't get it to fit, file a bug (mailto: localization@gadwin.com).
//
// NOTE: You must restart Gadwin PrintScreen for changes in this file to take
// effect.
//
// The official, most up-to-date version is always available from
// http://www.Gadwin.com/download/
// It is *strongly recommended* that you check there for the latest
// version before you begin to translate.
//
// NOTE: The first line must be maintained as-is, or the file will not be recognized!
//
// NOTE: Blank lines and lines starting with '//' or ';' are ignored.
//

// 1. Header
//
// 'Language' line
// A full description of the language in this file, in the local language, eg
// "English (UK)" or "Deutsch"
//
// 'Last-Modified-Using' line
// Please keep this line up-to-date, containing the last version of Gadwin
// PrintScreen that you made changes with, so people can compare files
// containing the same language to see which is the most up-to-date. The
// formatting of the value is unimportant, as long as it's human-readable.
//
// 'Authors' line
// A list of people who have worked on this file. When you do something, add (or
// move) your name to the front, and put a comma between each name.
//
// 'Author-email' line
// Should contain the e-mail of the person to last change the file only.
//

Language:
Last-Modified-Using: Gadwin PrintScreen v4.4 (1387)
Authors:
Author-email:

```
// 2. Strings
//
// All lines from now on contain text in Gadwin PrintScreen, and its translation.
// NOTE: The text in Gadwin PrintScreen *is* case sensitive.
//
// The \t and \n glyphs are recognised to mean tab and newline respectively.
// Text containing printf-style format specifiers (eg %s, %d) must be translated
// into text containing the same specifiers in the same order. No more, no less.
// Spaces are trimmed from the beginning and end of all strings before parsing.
// Strings that cannot be found in this file will remain untranslated.
// Some strings will have accelerator keys prefixed by an ampersand in the
// normal Windows way. The accelerator key can be re-assigned, but be careful of
// overlaps.
// If an English string is duplicated, which of the translated strings that will
// be used is undefined.
// New lines in translated strings are treated as new lines, but two or more
// newlines will be converted to one, because it involves a blank line.
// You can't change hotkeys just by changing their strings in here.
